Going up the table move the decimal to the left	T	tera-	1 000 000 000 000	10^{12}
	G	giga-	1 000 000 000	10^9
	M	mega-	1 000 000	10^6
	k	kilo-	1 000	10^3
	h	hecto-	100	10^2
	D	deka	10	10^1
	NO PREFIX (UNIT)		1	10^0
Going down the table move the decimal to the right	d	deci	0.1	10^{-1}
	c	centi-	0.01	10^{-2}
	m	milli-	0.001	10^{-3}
	μ	micro-	0.000001	10^{-6}
	n	nano-	0.000000001	10^{-9}

These are the metric units. The letter in the first column is used as the *prefix* before the unit. Some common types of units are: **grams (g)**, **meters (m)**, **liters (L)**, **joules (J)**, **seconds (s)**, and **bytes (B)**.

When working in the metric system it is helpful to use a “metric map.” This metric map will enable you to successfully convert your units.

⋯ indicates that there is a difference of three steps/decimal places/zeros to get from one prefix to the next.
↔ indicates that there is a difference of only one step/decimal place/zero to get from one prefix to the next.

EXAMPLES

1.0 kg = ? mg
1.0 kg = 1 000 000 mg

kilo and milli differ by six steps/decimal places/zeros; kilo → milli is going to the right on the “map”; therefore move the decimal six places to the right

2.3 cm = ? m
2.3 cm = 0.023 m

centi and no prefix (unit) differ by two steps/decimal places/zeros; centi → no prefix (unit) is going to the left on the “map”; therefore move the decimal two places to the left

From			To			Difference in zeros/ decimal places/steps	Move decimal left or right?
	prefix	unit		prefix	unit		
km	kilo	meters	m	<i>no prefix</i>	meters	3	right
Mg			Gg				
mL			L				
kJ			mJ				
μ s			ms				
B			kB				
cm			mm				
cL			μ L
